

Project B

Manitoba Crop Alliance WHEAT SEED TREATMENT Replicated Strip Trial Protocol

MANITOBA
CROP
ALLIANCE

Objective:

The purpose of this project is to quantify the impact of using a seed treatment on spring wheat – 6 sites.

Brief Summary:

- The grower will plant a CWRS or CNHR spring wheat variety.
- The grower will manage their crop as per their normal best management practices.
- The grower will plant 4 strips of seed treated with a seed treatment, alternating with untreated seed. An example is shown on the right.
- Strips should be full length of the field (minimum 1000 ft.) and width to allow for a full “pure” pass with combine header.

Rep 1	Treated
	Untreated
Rep 2	Untreated
	Treated
Rep 3	Untreated

Rep 4	Treated
	Untreated

Grower Requirements:

- Accurately record soil test results, variety, seeding date and rate, previous cropping history (rotation, fertilizer rates), tillage practices, fertilizer rates and application timing.
- Accurately record where all treatments are applied.
- Note any significant weather events throughout the growing season, such as high winds, hail, or extreme precipitation events.
- Areas containing waterways and headlands should be avoided. All other factors in the trial area must be treated the same.
- Alert project coordinator of expected harvest date and ensure all treatments are harvested the same day into a weigh wagon/calibrated grain cart, and that grain samples can be secured for protein and moisture content analysis.
- Allow MCA to use data for research, educational and information purposes.
- ***Must be a member in good standing with the MCA.***

MCA and Partners Agree to:

- Be available during seeding and harvesting.
- Take various measurements, including stand establishment, height, lodging and crop maturity.
- Provide a report analyzing treatment differences.

Research on the Farm Coaches:

- Project coordinator will work with local ROTF coaches to collect field observations and harvest samples.
- ROTF coaches may be local Manitoba Agriculture staff, retail or independent agronomists.

Benefits to the Grower:

- Access to the latest research that can be applied to their farm.
- Determine profitability of the practices.
- Learn accepted on-farm testing procedures.
